

KlimaForum: Sustainable Agriculture
DGI-BYEN, Copenhagen

12 December 2009 | 10:00 am to 12:00 pm

Organic Solutions to Climate Change and Food Security

Changing weather patterns are already impacting agriculture in many parts of the world. As countries experience shifts in climate conditions, food security has become a matter of increasing concern. A major contributor to climate change is modern, industrial agriculture. The effort to reduce our carbon imprint must include a re-examination of agricultural methods as well as exploring new approaches to securing our food supply. This session will highlight the key role of community supported Organic/Natural Agriculture in feeding a growing population while mitigating climate change and natural resource depletion.

Speakers

- **Dr. Vandana Shiva**, Leading environmentalist, ecologist, physicist, and activist (India)
- **Patrick Holden**, Director, Soil Association (UK)
- **Alan Imai**, Natural Agriculture Director, Shumei International (Japan)
- **Barbara Hachipuka Banda**, Director, Mbabala Women Farmers' Cooperative Union (Zambia)
